UW Madison DoIT

DoIT

- Central Campus IT Shop
- 700 full-time and student employees
- 55,000 UW-Madison faculty, staff and students
- Large Data Center
- Offer: Store, Help Desk, Training
- Use E-Biz Financials, SCM, & Projects

University of Wisconsin Department of Family Medicine

- Dept of UW Medical School
- Approx 30 clinics
- 500 FTE's
- \$55m revenue
- 300k patient visits
- Oracle GL customer

What it is: Define Requirements

Description

Defining requirements specifies the capabilities, features or attributes of the project's deliverables. Stakeholder needs, wants and wishes are analyzed to derive the requirements. Requirements are prioritized to determine which requirements will be included and excluded from the project.

Rationale/Purpose

Defining requirements specifies the capabilities, features or attributes of the project's deliverables. Stakeholder needs, wants and wishes are analyzed to derive the requirements. Requirements are prioritized to determine which requirements will be included and excluded from the project.

- Establish consensus and common ground among project stakeholders and participants
- Form the basis for project deliverables
- Ensure the customer receives a product or service with the functionality requested
- Define stakeholder expectations as specific results
- Set the stage for effective project planning

Who is involved

Project Manager
 Project Sponsor
 Project Stakeholders
 Project Customer

Result

11i Project Overview

- Goal
 - Upgrade aging 10.7 GL system
- Resources
 - 6 experienced individuals, 6 months, \$100,000
- Vision
 - Re-implement, reconfigure, and cleanup system
- Challenges

My PMA Objectives

- Expert, standard, endorsed project templates
- Objective expert advice on demand
- Maximum project flexibility
- Roadmap

DoIT Management PMA Goals

- Support DoIT Project Management Initiative
 - Real Life Feedback
 - Experiment with mentor model
- Improved budget estimates
- Higher confidence project on time and within budget
- Well managed project

PMA Overview/Demo

Stage 1: Conceptualize

[Glossary](#)Search PMA:

Activities

[1. Define project mission and vision](#)[2. Establish strategic alignment](#)[3. Identify stakeholders](#)[4. Define high level business requirements](#)[5. Determine feasibility](#)[6. Develop business case](#)

Overview

- Produces a Project Proposal to create a product or service.
- Determines the feasibility of the proposed solution.
- Determines the project's alignment with the organization's mission and goals.
- Establishes a business case to justify the project.
- Approves the project to advance to the Initiate Stage.

Under Construction - Target date to be determined

What it is

How to

Templates/Examples

What it is: Define Scope

Description

Defining the scope of a project develops a common understanding of what is included in and excluded from the project. The scope builds upon the project concept developed in the Conceptualize Stage.

Scope is usually defined by:

- Project Business Need
- Project Goals
- Product Description
- Project Customer, Project Sponsor, Project Manager
- Project in Scope, Out of Scope
- Project Critical Success Factors
- Project Assumptions
- Project Constraints
- Project Deliverables

Rationale/Purpose

Defining a project's scope helps establish a common understanding for all project stakeholders. It is the foundation on which the schedule, budget and staffing plans are built.

Scope also serves as the basis for future project decisions. The documented scope helps address "scope creep" by making changes obvious.

Who is involved

Project Manager
Project Sponsor
Project Stakeholders
Customers

Result

This information is included in a separate section of your project charter often referred to as "Project Scope".

Project Name	DFM Oracle 11i Upgrade
Project Manager	John Schmitz, DoIT
Sponsor	Steve Hall, DFM
Customer	Department of Family Medicine (DFM)
Document Version and Date	Version 2.0 – 02/02/06

Project Scope	
Background & Business Need	<p>DFM, a department of the UW Medical School, operates patient care clinics across Wisconsin. They acquired Oracle Applications General Ledger (GL) version 10.7 in 1998 via a cooperative arrangement with DoIT. DFM's version of Oracle Financials (now called the E-Business Suite) and much of the underlying architecture has been de-supported by Oracle. DoIT staff feel they can no longer guarantee system operational integrity.</p> <p>DoIT and DFM staff met in the fall of 2004 and tentatively decided to follow DoIT's planned upgrade to the latest Oracle release. DoIT upgraded to Oracle E-Business Suite 11.5.10.2 in January, 2006.</p>
Project Goals	<ul style="list-style-type: none"> - Move to Oracle supported, manageable, and more state-of-the-art <u>database</u>, tools, and overall technical environment. - Move to a supported server platform. - Upgrade, at a minimum, to the Oracle GL version used by DoIT. - Convert from existing system while maintaining needed functionality <u>and</u> retaining desired data. - Use an implementation approach that minimizes loss of system <u>availability</u>. - Upgrade with minimal enhancements to existing functionality beyond <u>included</u> features to reduce project costs and risks. - Move off the existing DFM production servers in a timely manner.

What it is: Hold Project Kick-Off Meeting

Description

The Project Kickoff Meeting formally recognizes the start of the project. The project manager uses this meeting to communicate a shared view of the project to ensure understanding of the approved project charter and to clarify next steps involved in producing the Planning Stage deliverables.

Rationale/Purpose

The Project Kickoff Meeting provides an opportunity for the following:

- Introduce Official Sponsor(s) and Project Manager
- Introduce Key Customers and Stakeholders
- Review Project Scope, Definition and Objectives
- Review High-level Timeline & Milestones, Roles, and Budget
- Review Deliverables
- Review Challenges
- Explain Next Steps

This meeting allows the Sponsor(s) to relay commitment to the project's outcomes. It provides an opportunity for the Project Manager to review the approved project charter, answer any questions to ensure understanding, and explain the next steps contributing to development of a Work Plan and Control Plan in order to finalize the Project Plan. Including Stakeholders in this meeting builds communication and coordination, making project success more likely.

Who is Involved

Project Manager
 Project Sponsor(s)
 Project Stakeholders

Result

The Project Kickoff Meeting ensures that all Stakeholders are familiar with and share a common understanding of the approved Project Charter and that they are aware of the next steps to complete the project Work Plan and Control Plan. The more complete the resulting plans, the more likely project implementation will progress efficiently and effectively.

How to: Hold Project Team Kick-Off Meeting

Recommended actions and strategies

The table below describes actions you can take to conduct a Project Team Kick-off Meeting:

Tip: Consider doing a periodic checkpoint to review the scope and requirements with the project sponsor just to confirm there are no assumptions about changes to be made.

	What to do	How to do it
1	Schedule Project Team Kickoff Meeting	Determine when team members are available and schedule the meeting.
2	Prepare Agenda and Meeting Materials	Several days prior to the meeting, prepare and send the agenda, completed Project Plan, and Management Methods/Expectations Worksheet to team members.
3	Hold Project Team Kickoff Meeting	Gather in a room conducive to presentation and discussion. Review and discuss details of the Project Plan. Hold a discussion to refine and clarify the management methods and expectations for the Execute and Control Stage. Keep the conversation focused and note all contributions using flip charts, projected computer screen, or other.
4	Project Team Kickoff Meeting Follow-up	Send meeting minutes to team members and invite additions/corrections. Include team input in the Management Methods and Expectations Worksheet and send this to team members for a follow-up review. Invite additions/ corrections.

Execute and Control Phase

Project Dashboard

Key: Green = on track Yellow = needs attention Red = significant problem

Schedule	Budget	Scope	Overall
Target date met	Costs 5% over revised budget.	Planned system delivered	Quality system implemented Stakeholder's needs met
Green	Yellow	Green	Green

Summary Narrative

The Department of Family Medicine (DFM) Oracle upgrade project has been completed. DFM's OAT2 Oracle Apps 10.7 General Ledger (GL) system was successfully replaced by Oracle's latest 11i E-Business Suite's GL module. The underlying system architecture, database, servers, and application tools were upgraded to current, fully-supported versions. The system implementation followed, and benefited from our experience with, DoIT's CBS Oracle 11i upgrade. The upgrade was accomplished by re-implementing the DFM system from the server hardware on up. The new software was tested, the GL system reconfigured, interfaces upgraded, reports and reporting tools rebuilt, training provided, and documentation updated. Three year's of journal entry and budget historical data was converted to the new system.

The reimplementation approach served us well by allowing us to remove obsolete data and system components, eliminate any need for downtime, and parallel test the old versus new system's financial operations for a month. The full month's parallel test was completed in August. The new Oracle 11i DFMP system was accepted, and the old OAT2 (OAT1 test) system decommissioned in September.

Celebration

- Luncheon
- Appreciation Awards
- Certificates (Emmy's)

Project Success Factors

- Team dedicated to a clear, shared vision
- Strong, positive supplier-customer working relationship
- Experienced project team
- Adequate resources and DoIT support
- Well-organized effort

Summary PMA Experience

- Excellent guidelines & content
- Standard, professional templates
- Flexible adaptation
- Positive customer feedback
