# Agenda

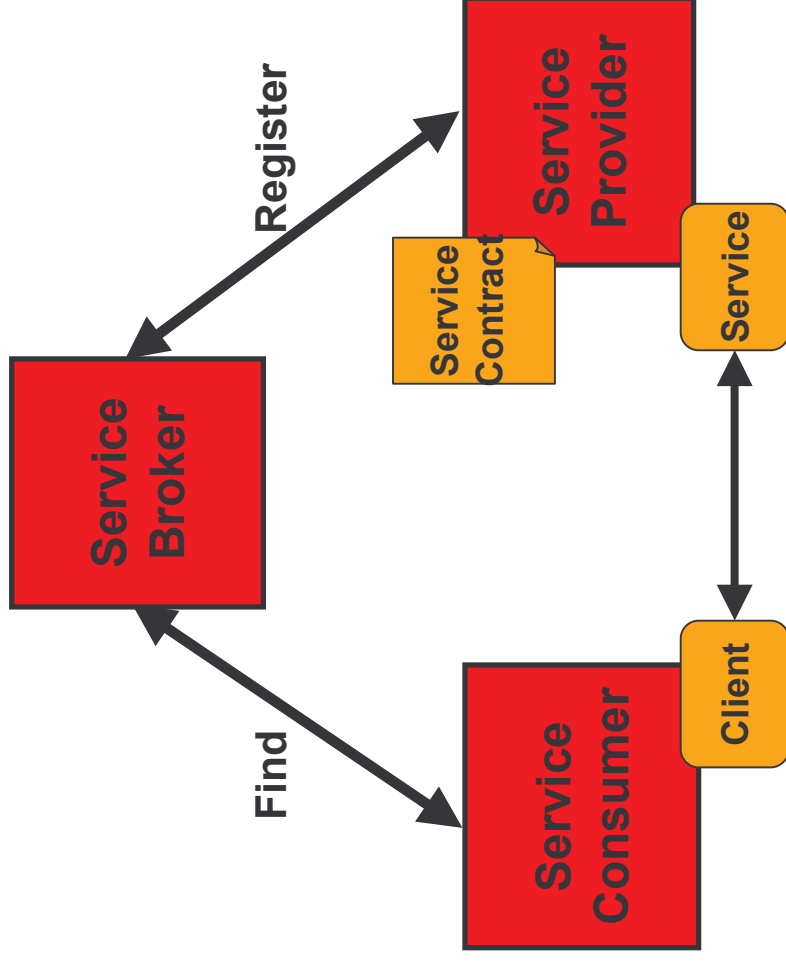

- Service Enablement in EBS Context
- SOA Suite / FMW Overview
- EBS Adapter
- Integration Repository
- EBS Integration Interfaces
- Order Visibility with BPEL + BAM Case Study
- EBS Adapter Demo
- EBS Adapter Roadmap for R12

# Service Oriented Architecture for EBS

# What is Service Enablement?

## It's all about...

- Capability to Provide Services
- Ability to Consume Services
- Abstracted Re-Usable Interfaces
- Standard Based Web Services
- Documented Services & API

# Why Service Enablement?

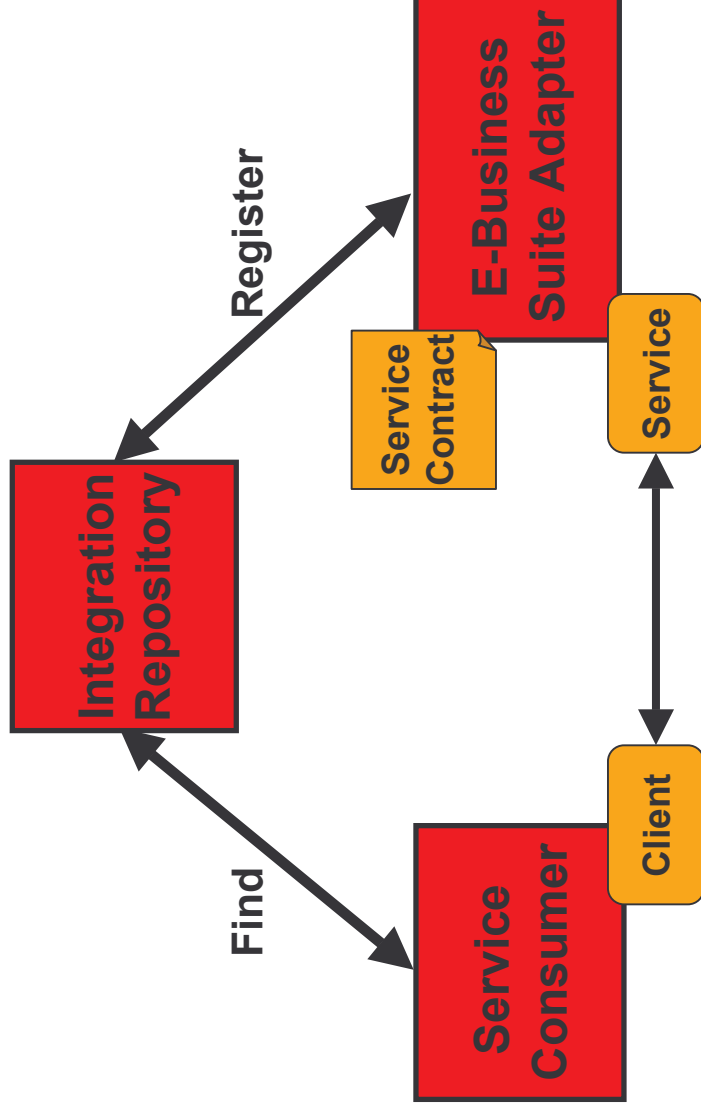

## Business Drivers

- Leveraging the investment of existing Applications
- Rapid time to design and deploy new solutions
- Interoperability in a heterogeneous ecosystem
- Integrated View of business processes
- Maximize ROI by re-usability of services
- Low TCO for implementation and deployment

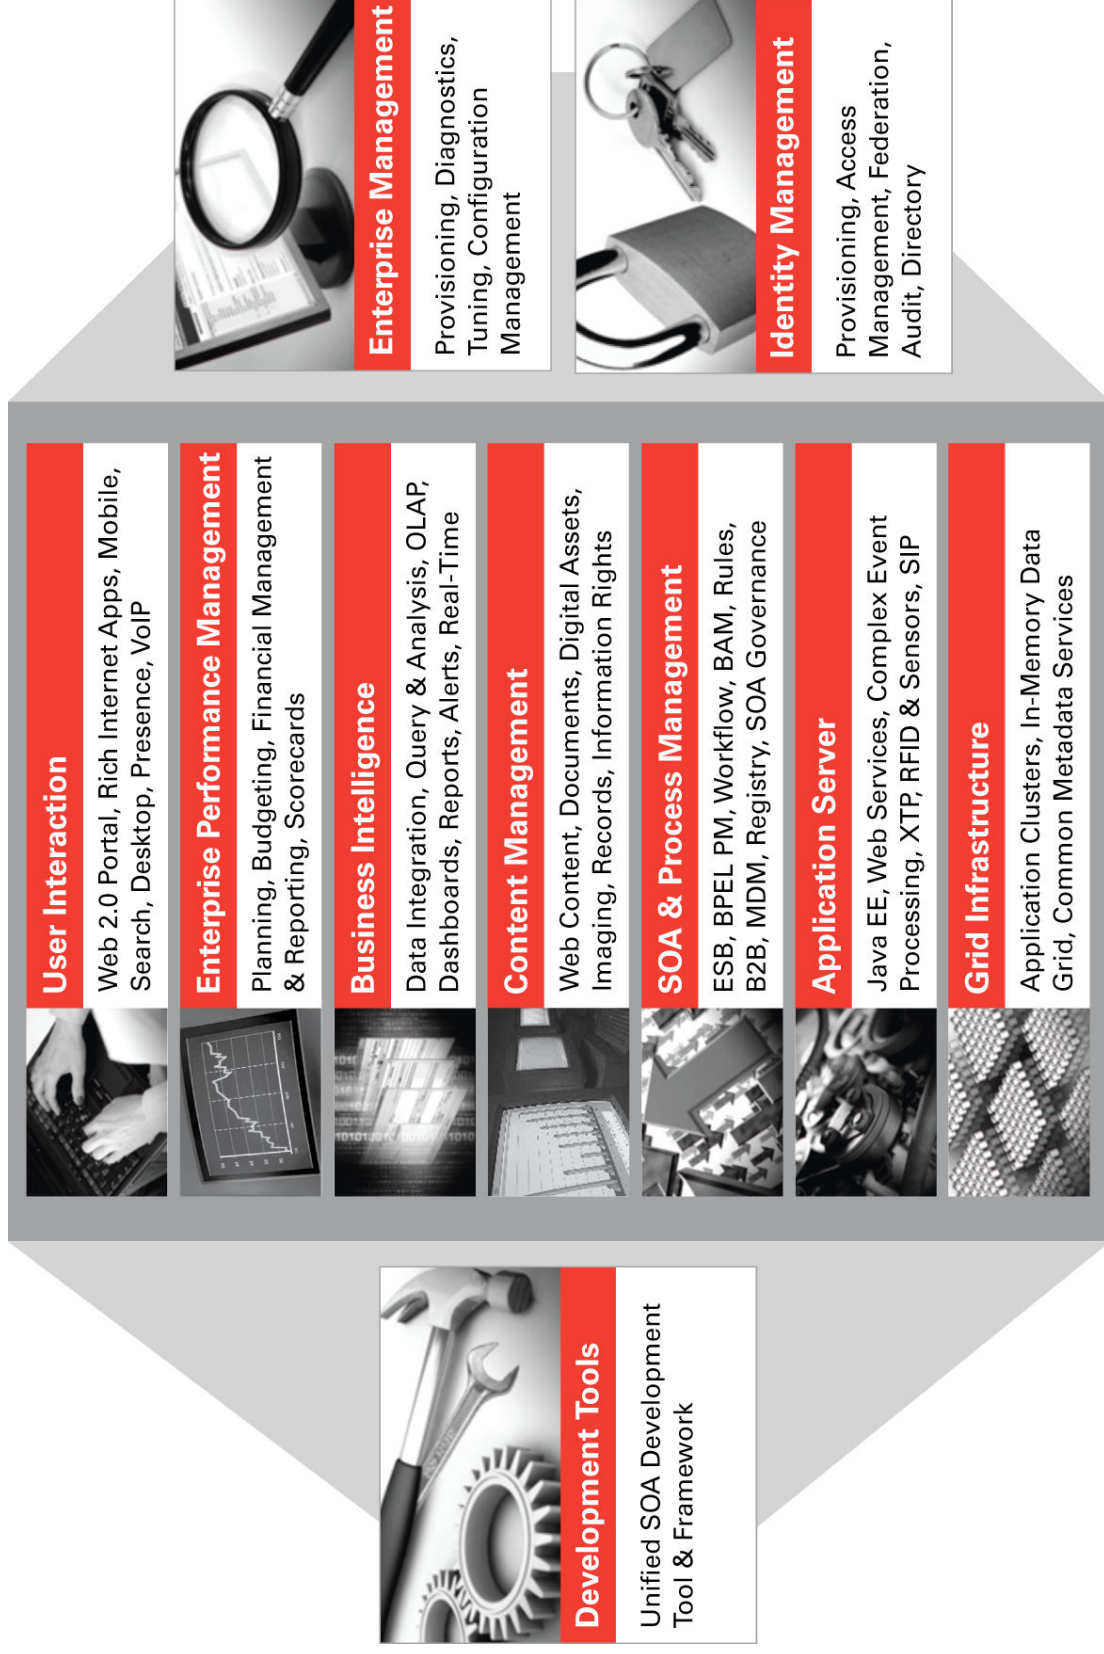

# Service Oriented Architecture

<b>SOA Concept</b>	<b>E-Business Suite SOA</b>
<b>Service Broker:</b> Describe Service's Location and Contract	Integration Repository
<b>Service Provider:</b> An appropriate agent to implement a particular service	Oracle E-Business Suite Adapter

Apps Adapter

Oracle BAM

ORACLE

# Oracle E-Business Suite Adapter

## Schematic Architecture

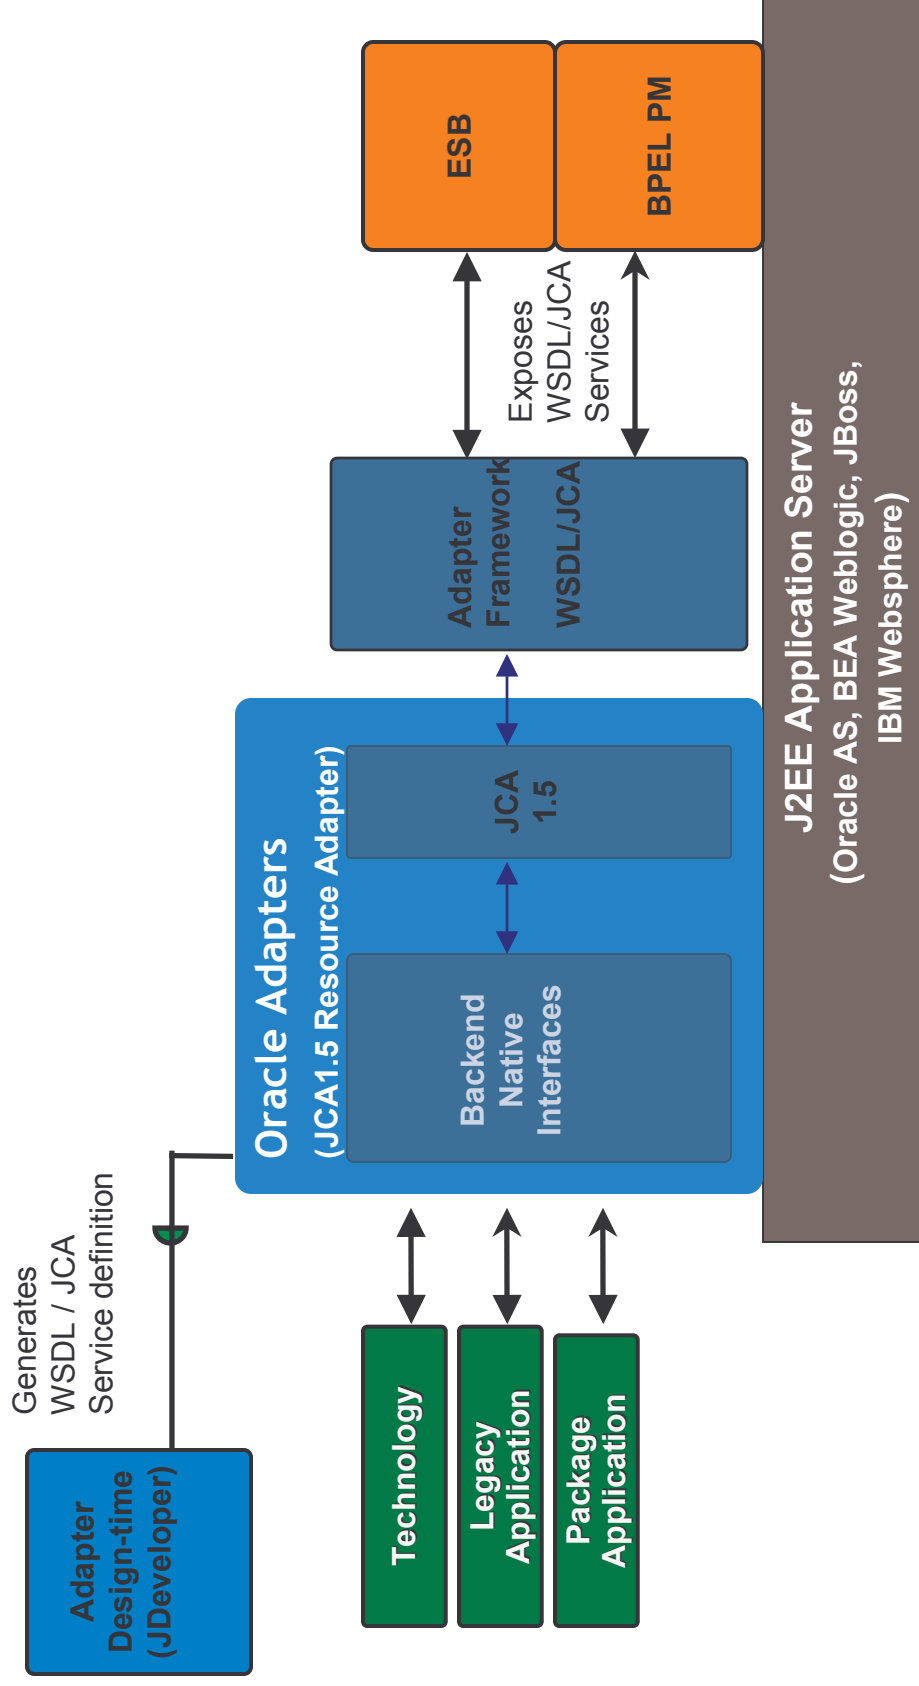

# **EBS Adapter and the Integration Repository**

# Salient Features

## Oracle Applications Adapter

- Leverages Integration Repository for 11.5.10
  - Expose only recommended public interfaces
- Version aware design-time
  - Packaged IREP content for 11.5.10
  - Direct Application connectivity for pre 11.5.10
- Completely standards based product
- XA Support
- Automatic Application Context Initialization

# Oracle Adapter Architecture

# Integration Repository

## Single Source of Truth

- **PL/SQL APIs (2650+)**
- **Open Interface Tables (147+)**
- **Concurrent Programs (214+)**
- **XML Gateway (170+)**
- **eCommerce Gateway (24+)**
- **Interface Views**
- **Java**
- **Web Service**

The screenshot displays the Oracle Integration Repository interface for the 'Process Order API'. The top navigation bar includes 'View', 'Product Family', and 'Printable Page'. The main content area is divided into several sections:

- Internal Name:** OE\_ORDER\_PUB
- Type:** PL/SQL
- Owning Product:** Order Management
- Business Entity:** Sales Order
- MetaLink:** Order Management Suite Documentation
- Source File:** patch/115/sql/OEXPORDS.pls
- Source Version:** 115.154.11510.9
- Source Product:** ONT

Below this information is a **Description** section stating: "This public API allows users to perform various operations on sales orders in the Order Management system."

The **Procedures and Functions** section contains a table with the following data:

Name	Internal Name	Status	Description
Delete Order	DELETE_ORDER	Active	Use this procedure to delete a sales order in the Order Management system.
Delete Order Line	DELETE_LINE	Active	Use this procedure to delete a sales order line in the Order Management system.
Get Sales Order	GET_ORDER	Active	Use this procedure to retrieve the information about a Sales Order.
ID To Value	ID_TO_VALUE	Active	Use this procedure to retrieve sales order attribute values when supplying the ID information for those attributes.
Lock Sales Order	LOCK_ORDER	Active	Use this procedure to lock a sales order in the Order Management System.
Maintain Sales Order	PROCESS_ORDER	Active	Use this procedure to create, update or delete Sales Orders in the Order Management system.
Process Order Header	PROCESS_HEADER	Active	Use this procedure to process the creation, update, or deletion of a sales order header in the Order Management system.
Process Order	PROCESS_LINE	Active	Use this procedure to process the creation, update, and deletion of sales

# Integration Repository

<http://irep.oracle.com>

- Catalog of all Public Interfaces – the single source of truth for Integration
- Common User Interface to search and browse E-Business Suite interfaces
- Embedded within the core E-Business Suite schema to leverage the standard security system
- Preconfigured for exposing & administering Interface Points as Web Services
- Automatically kept in step with source code, via standard patching technology
- Hosted in 11.5.10, packaged in 12.

# Oracle Apps Adapter

## Standards Based

- Based on J2CA 1.5 standards
- Deployed as a resource adapter in the same Oracle AS Server Containers for J2EE (OC4J)
- Supports open standards, such as
  - J2EE Connector Architecture (**J2CA**)
  - Extensible Markup Language (**XML**)
  - Web Service Invocation Framework (**WSIF**)
  - Web Service Inspection Language (**WSIL**)
  - Web Service Definition Language (**WSDL**)
- Uses JDeveloper based design-time environment
- Generates Adapter metadata as WSDL files with J2CA extension

# Supported Interfaces

- Business Events
  - Seeded and custom events for outbound
  - Only custom events for inbound
- PL/SQL APIs
  - Packaged IREP annotated for 11.5.10 (public APIs)
  - All for pre-11.5.10
  - Custom + Ones still not annotated in IREP
- XML Gateway Interfaces
  - Seeded + custom maps
- Open Interface Tables & Concurrent Programs
- ECommerce Gateway Interfaces

# Oracle E-Business Suite Adapter

## Benefits

- Exposes E-Business Suite Integration Interfaces as standard Web Services for 1.5.x versions
  - Supports multiple versions of Oracle Apps in a heterogeneous ecosystem
  - Supports most-used interface types
- Intuitive UI
  - Simplifies design-time experience
- Faster design to deploy time
  - Declarative development of integration solutions

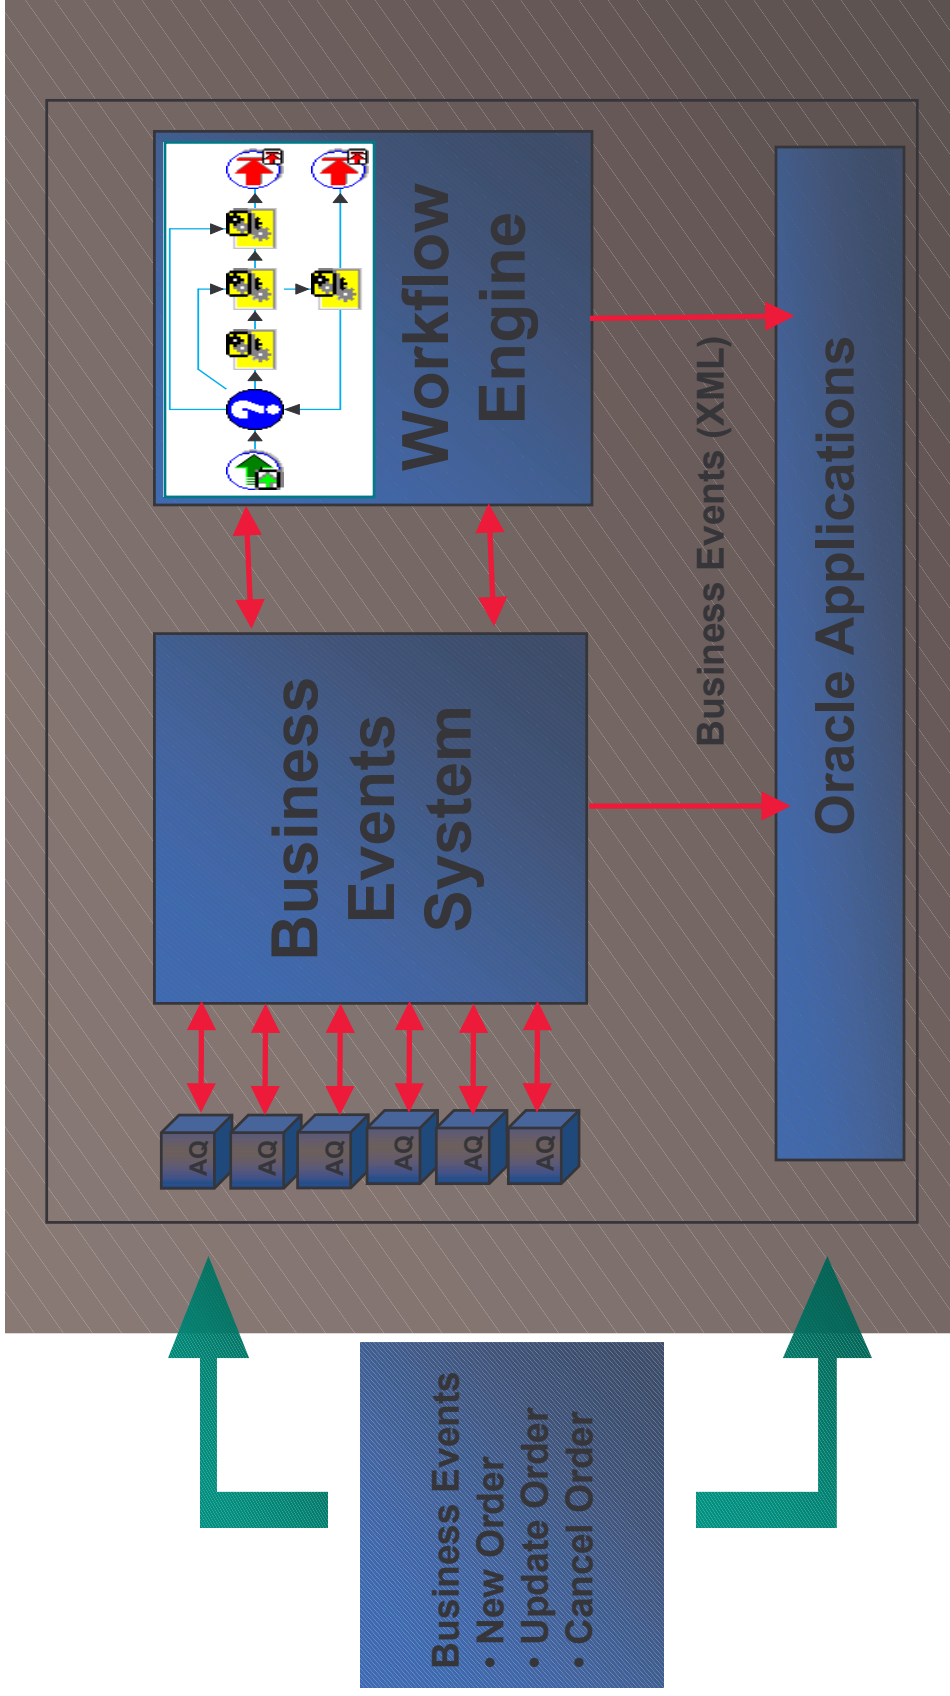

# About Integration Interfaces

# Business Event System

- Events as business documents
  - Component of the Oracle Workflow
  - Based on Oracle Advanced Queues (Oracle AQ)
  - Allows Apps modules and external systems to raise events
  - Facilitates event subscriptions
  - Subscriptions can be synchronous or asynchronous
- Provides hooks into the E-Business Suite for,
  - Messaging Integration
  - Workflow Business Processes
  - Code Extensions
- Supports non-invasive changes

# Business Event System

## Component Architecture

# Business Event – Outbound

## Architectural Diagram

Design Time

Action Performed

Run Time

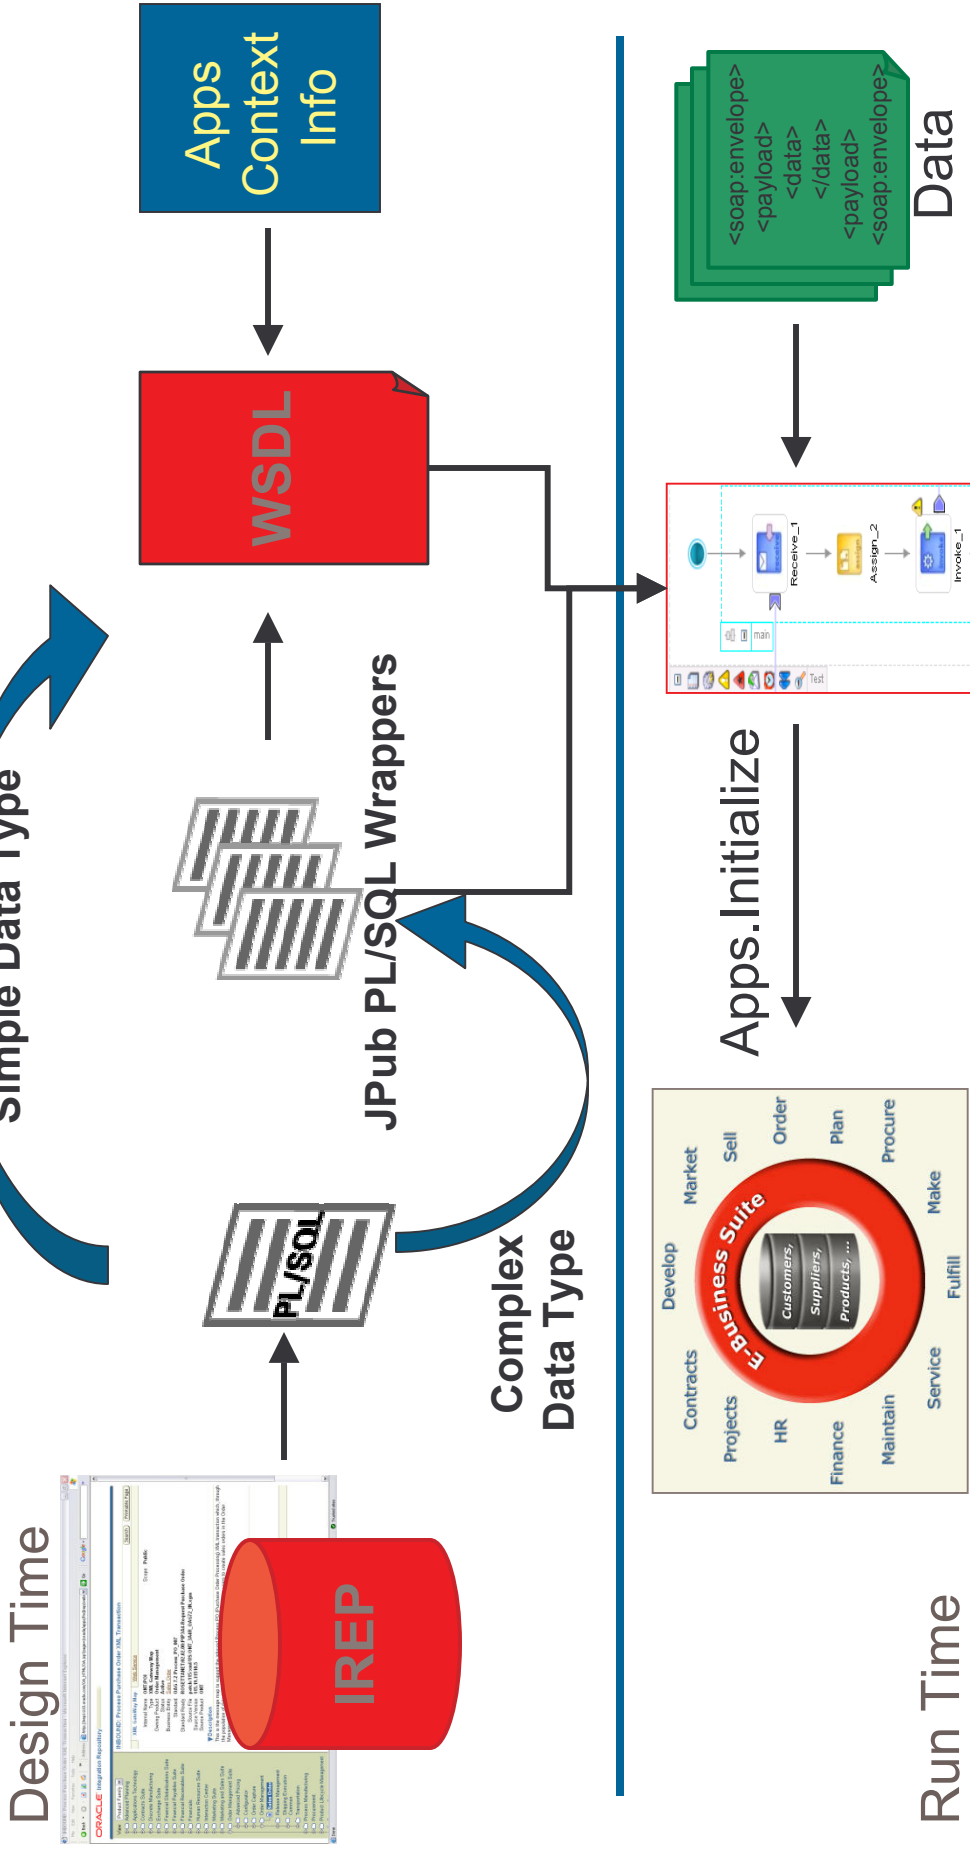

# PL / SQL APIs

- Public PL/SQL are used for inserting and updating Oracle Applications data
- Multiple operations can be performed by the procedures for a Business Service
- The PL/SQL APIs are typically used for A2A integration purposes

# PL/SQL APIs Architecture

# Order Visibility Case Study

# Business Problem

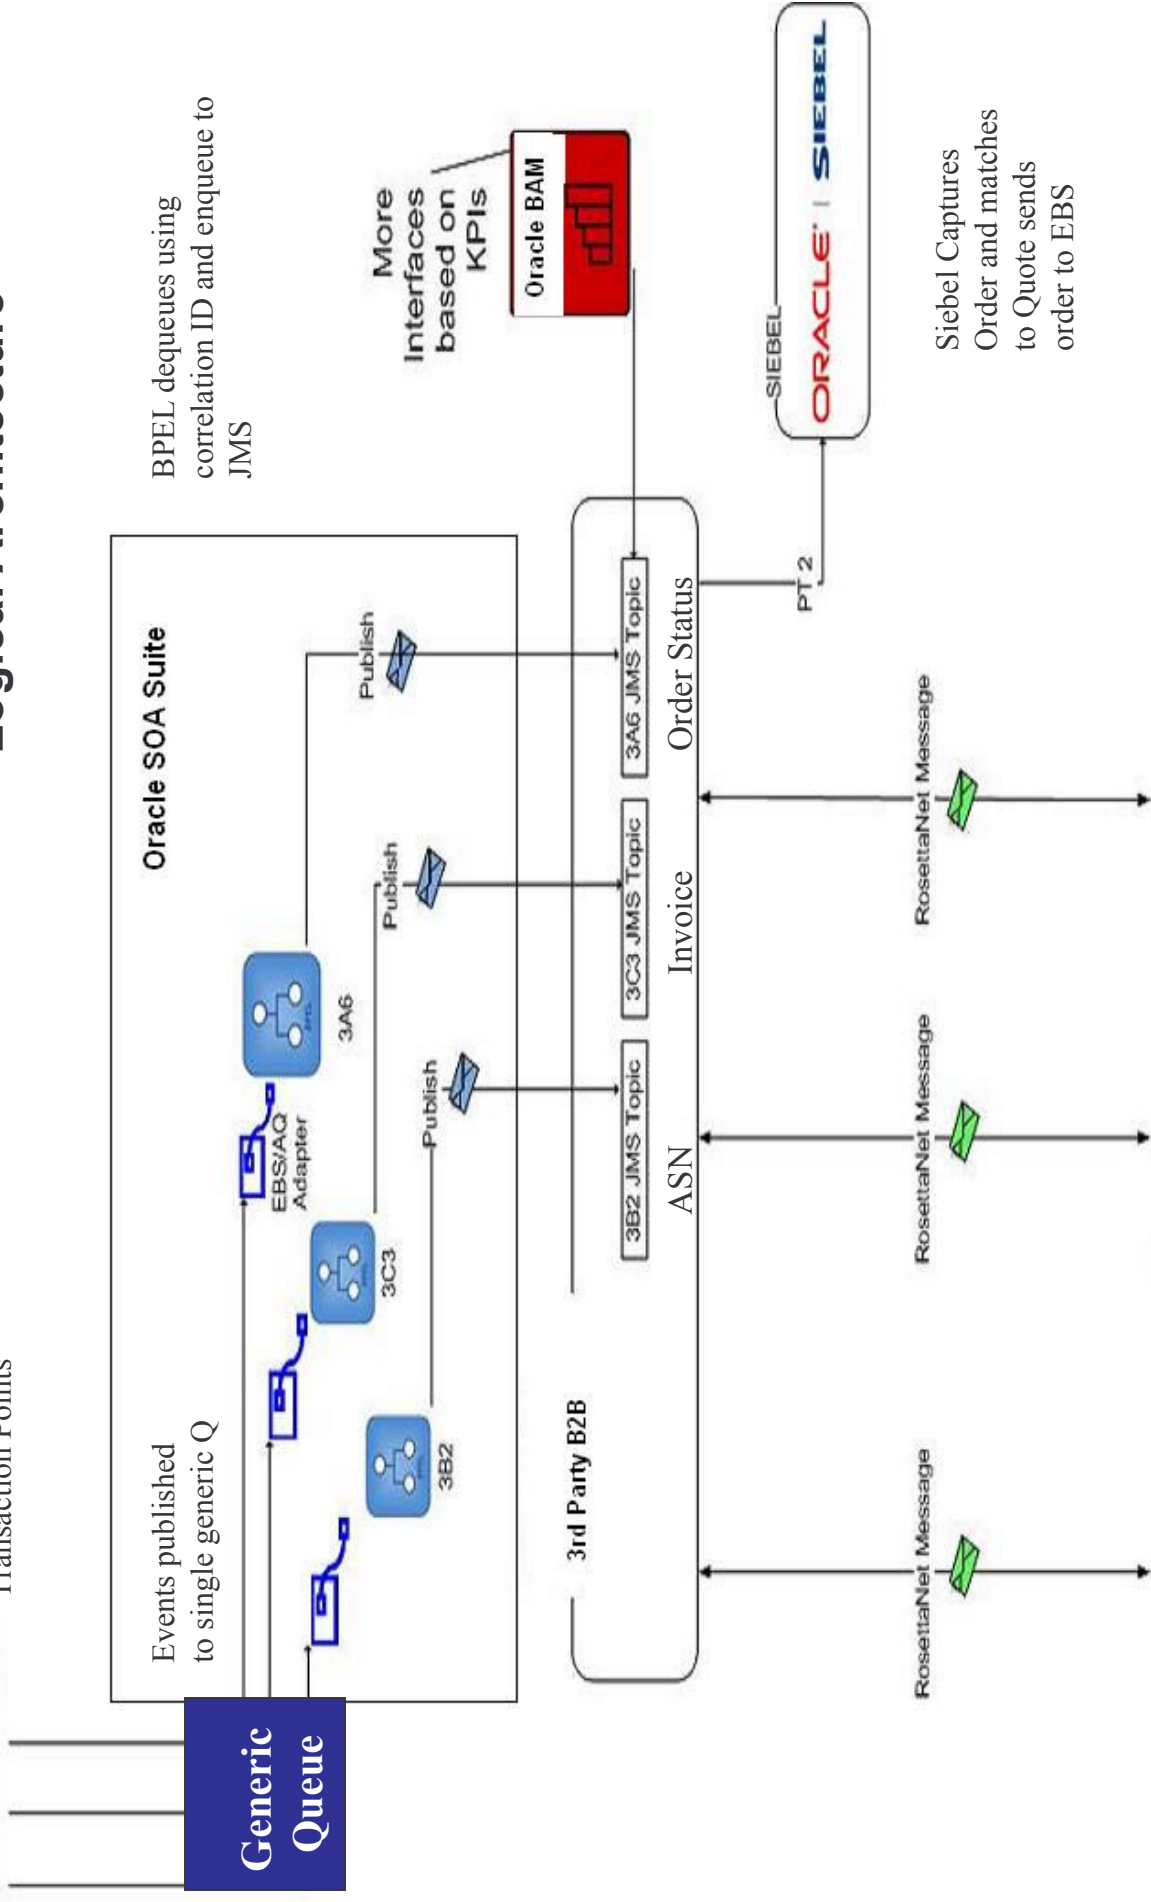

- The Business Use Case
  - Move to automated Quote-to-Order Processing.
  - Faster rampup of additional B2B partners.
  - Increased RN PIPs interactions (new message types being added)
  - Partners are demanding faster turnaround, forcing Company to upgrade I.e. – stop being the bottleneck
- What is expected from BPEL/BAM
  - Event driven integration and orchestration for Order Status, ASN, and Invoice from ERP (EBS) to B2B
  - Create RosettaNet documents for PO, ASN, and Invoice
  - Order Processing Dashboard

# Technical Issues/Requirements

- Technical Requirements
  - Integrate EBS with 3<sup>rd</sup> Party B2B using JMS.
  - Order Processing was heavily customized with custom PL-SQL validation.
    - The Order for EMEA has different validation from Order for APAC.
    - SLA from trading partners (15m – 1h) turnaround for order processing.
- Software versions
  - EBS for Order Processing.
  - 3<sup>rd</sup> Party for B2B.
  - BPEL for Integration and BAM for Visibility.
  - Siebel for Order Capture.

Order Processing Workflow  
events generated at Key  
Transaction Points

# Logical Architecture

BPEL dequeues using  
correlation ID and enqueue to  
JMS

More  
Interfaces  
based on  
KPIs

Siebel Captures  
Order and matches  
to Quote sends  
order to EBS

External Contract Manufacturers

# BAM Usage

- Information available:
  - Order status
  - Volume counts
  - Cycle times
  - B2B service level
  - Errors
- Search capability:
  - Date range
  - Error
  - Customer
  - Quote number
  - PO number
  - SO number
  - Last state

# **EBS Adapter Roadmap: R12 and beyond**

# Key Features

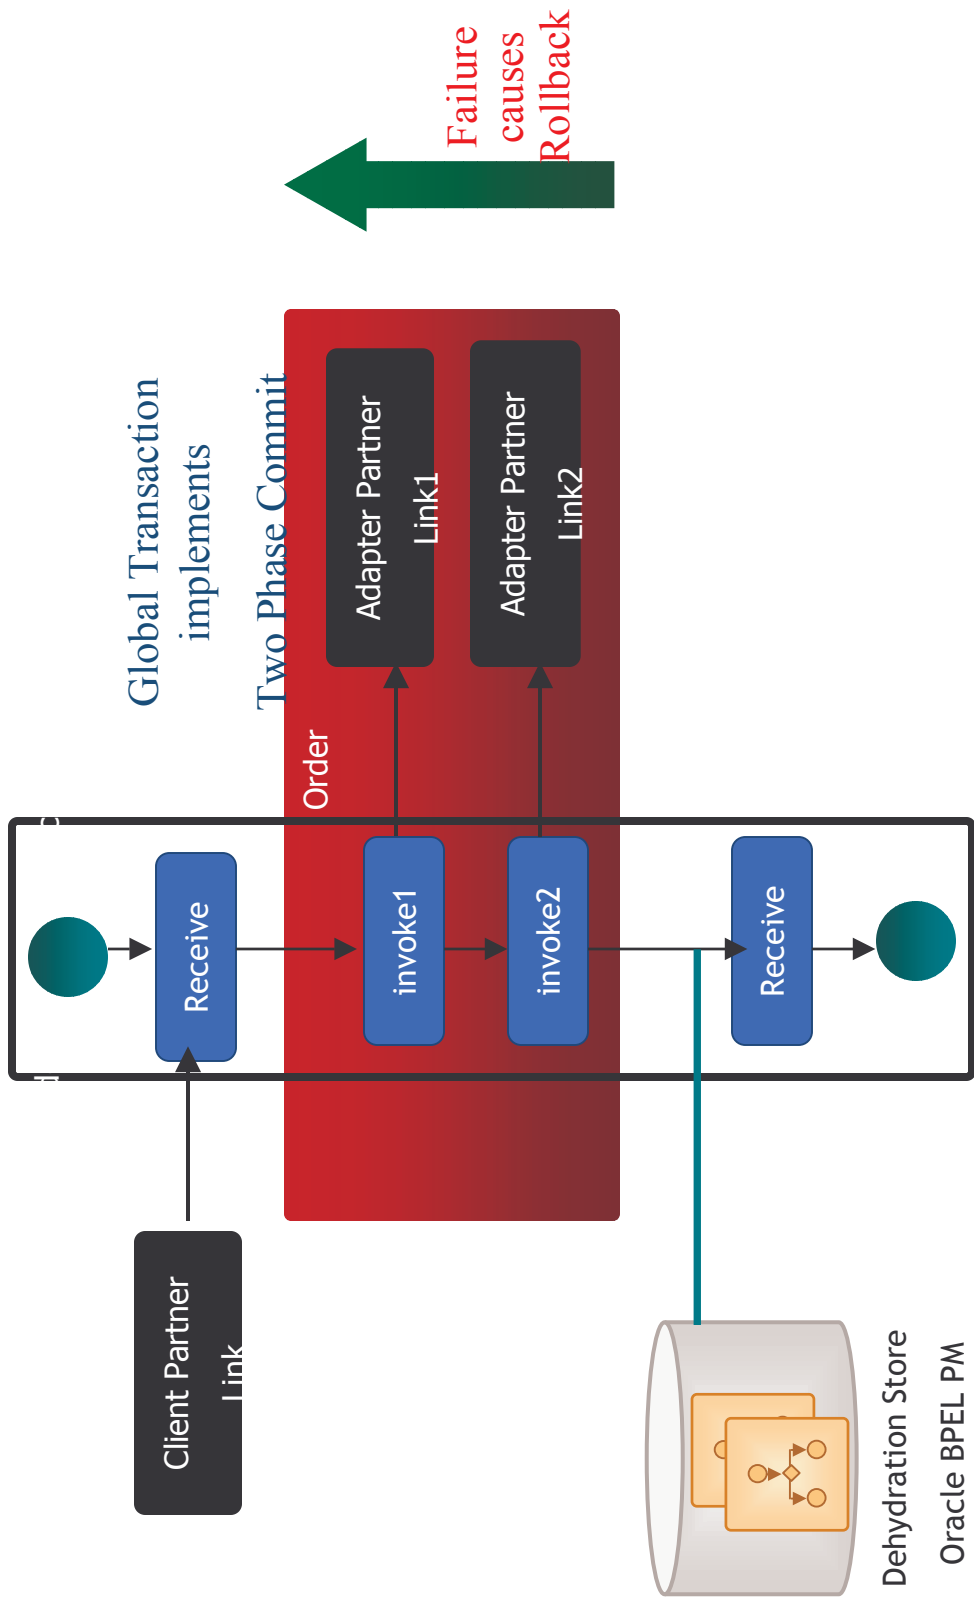

ORACLE™

# Application Context

# Global Transaction

# Secured and Trusted Connection

Oracle Fusion Middleware

Oracle EBusiness Suite

- APPS Schema name / Password not required
- FND Username / Password works
- FMW, a trusted client
- Connection Managed by the EM

ORACLE

# Function Security Enabled

Definition: *Function Security is the base layer of access control in Oracle EBusiness Suite. It restricts user access to individual menus and menu options within the system, but does not restrict access to the data contained within those menus.*

- Restricts user access for execution privileges
- Profile Option EBS ADAPTER FUNCTION SEC ENABLED
  - By Default it will be set to N
  - To implement Function Security set to Y
- Implemented for EBS R12 as well as EBS 11i10
- Based on Role Based Access Control
- Available via Metalink Note: 464164.1

# Coarse Grained Services

## XML Messages

- ✓ Single Operation per message
- ✓ Document definition based on standards (OAG, cXML, RosettaNet, UCCNet etc.)
- ✓ DTD's converted to XML Schema's as input

```
<portType name="PO">  
  <operation name="PROCESSPO">  
    <input message="tns:Request"/>  
  </operation>  
</portType>
```

```
<portType name="PO">  
  <operation name="CANCELPO">  
    <input message="tns:Request"/>  
  </operation>  
</portType>
```

```
<portType name="INVOICE">  
  <operation name="PROCESSINVOICE">  
    <input message="tns:Request"/>  
  </operation>  
</portType>
```
