Title - Lessons Learned Implementing RMS
The top 10 things implementers never tell you

Presenter – Matt Gandolfo

April 16, 2008

Room 107

This is a presentation based on numerous lessons learned while implementing RMS 10 in conjunction with RDM, RIB, ReSA, RTM, and a SIM like module. We have encountered significant issues requiring replanning of our project after discovering that the code base was not as solid as we had hoped, the purge utilities needed to be developed to handle our significant data volumes, and the warehousing data in RMS poses some significant support and performance issues. Additionally, we will briefly touch on the need to have very solid Version Control methodologies in place to handle the work your internal development team and any external resources.
